

## Practical-4

# Deploy the Machine Learning Model using Flask and Docker.

Task 1: Install the required libraries

```
pip install  
Flask  
pip install gunicorn
```

Task 2: Follow the steps described in theory material to deploy the model using Flask. Run the flask application to execute the deployed model.

Flask Code :

```
from flask import Flask, jsonify, request  from your_model import predict  
# Import your model's prediction function  
  
app = Flask(__name__)  
  
@app.route('/predict', methods=['POST']) def  
prediction():  data =  
request.get_json(force=True)  
    result = predict(data) # Use your model to make predictions    return  
jsonify(result)  
  
if __name__ == '__main__':  
    app.run(port=5000)
```

Task 3: Create the docker file using the steps described in theory material.

Docker File Code :

```
FROM python:3.8-slim  
WORKDIR /app  
COPY . /app  
RUN pip install --trusted-host pypi.python.org -r requirements.txt  
EXPOSE 80
```

ENV NAME World

CMD ["python", "app.py"]

#### Task 4 : Create the Docker Image

docker build -t dockerfile .

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker build -t dockerfile .  
[+] Building 25.5s (9/9) FINISHED  
=> [internal] load .dockerignore  
=> => transferring context: 2B  
=> [internal] load build definition from dockerfile
```

#### Task 5 : Create the Docker File

##### What's Next?

View summary of image vulnerabilities and recommendations → `docker scout quickview`

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker run -p 4000:80 dockerfile
```

#### Task 6 : Check Performance

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker images  
REPOSITORY    TAG       IMAGE ID       CREATED        SIZE  
dockerfile    latest    ee193e6cc1a7   2 minutes ago  509MB  
hello-world   latest    9c7a54a9a43c   6 months ago   13.3kB
```

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker images  
CONTAINER ID   NAME          CPU %     MEM USAGE / LIMIT   MEM %     NET I/O       BLOCK I/O    PIDS  
785e4a62c222   quizzical     0.00%     0B / 0B              0.00%     0B / 0B       0B / 0B      0
```

#### Task 7 : Hands-on on docker commands:

##### 1. docker pull ubuntu:latest

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker pull ubuntu:latest  
latest: Pulling from library/ubuntu  
aece8493d397: Downloading [=====>] 26.84MB/29.54MB
```

##### 2. docker ps

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker ps
```

CONTAINER ID	IMAGE	COMMAND	CREATED	STATUS	PORTS	NAMES
--------------	-------	---------	---------	--------	-------	-------

### 3. docker ps -a

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker ps -a
```

CONTAINER ID	IMAGE	COMMAND	CREATED	STATUS	PORTS	NAMES
785e4a62c222	dockerfile	"python app.py"	7 minutes ago	Exited (0) 7 minutes ago		quizzical bardeen
523f21a1dd21	dockerfile	"python app.py"	8 minutes ago	Exited (0) 8 minutes ago		xenodochial moser
98032478cfe5	hello-world:latest	"/hello"	2 months ago	Exited (0) 25 minutes ago		mystifying_fermi

### 4. docker inspect container\_name or id

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker inspect 785e4a62c222
```

```
